Preface	vii
List of Figures	xi
List of Tables	xiii
1 Duration of life as a random variable	1
1.1* A note on Stieltjes integral	9
2 Models of distribution functions $F(x)$ and force of mortality $\mu(x)$	11
3 The empirical distribution function of duration of life	23
4 Deviation of $\widehat{F}_n(x)$ from $F(x)$ as a random process	33
5 Limit of empirical process: Brownian bridge. Distribution of $\chi^2$ goodness of fit statistic	43
6 Statistical consequences of what we have learned so far. Two-sample problems	55
7 Testing parametric hypotheses. Unexpected example – exponentiality of durations of rule of Roman emperors	67
7.1 Durations of rule of Roman emperors	70
7.2 Testing exponentiality	73
7.3* Chronology of reign of Roman emperors from Kienast (1990)	82

---

Sections with an “\*” are supplementary material.

7.4*	Distributions of Kolmogorov–Smirnov and $\omega^2$ statistics from a standard Brownian motion	84
8	Estimation of the rate of mortality	87
9	Censored observations. Related point processes	97
10	Kaplan–Meier estimator (product-limit estimator) for $F$	107
10.1*	A note on Wiener stochastic integral	115
11	Statistical inference about $F$ , based on the Kaplan–Meier estimator	121
11.1	Testing a simple hypothesis.	123
11.2	Testing a parametric hypothesis	125
11.3	Two-sample problem for censored observations	133
11.4	Why is (11.9) correct? Ito integral	139
12	Life insurance and net premiums	141
12.1*	Remark on mixtures of distributions	152
13	More on net premiums. Endowments and annuities	159
14	Annuities certain. Some problems of general theory	167
15	Right-tail behavior of $\hat{F}_n$ . Non-parametric confidence bounds for expected remaining life	175
15.1*	Asymptotic form of the excess life distribution	187
15.2*	Recurrence formulae for calculation of non-crossing probabilities	191
16	Population dynamics	197
16.1*	Age structure of a population	211
	Bibliography	217
	Index	225
