Preface xiv

1 Stochastic processes and financial data generating processes **1**
1.1. Introduction 1
1.2. Stochastic processes and their properties 5
1.3. The behaviour of financial variables and beyond 8

2 Commonly applied statistical distributions and their relevance **15**
2.1. Normal distributions 15
2.2. χ^2-distributions 23
2.3. t-distributions 25
2.4. F-distributions 28

3 Overview of estimation methods **30**
3.1. Basic OLS procedures 30
3.2. Basic ML procedures 32
3.3. Estimation when iid is violated 33
3.4. General residual distributions in time series and cross-section modelling 35
3.5. MM and GMM approaches 40

4 Unit roots, cointegration and other comovements in time series **45**
4.1. Unit roots and testing for unit roots 45
4.2. Cointegration 49
4.3. Common trends and common cycles 51
4.4. Examples and cases 53
4.5. Empirical literature 58

5 Time-varying volatility models: GARCH and stochastic volatility **66**
5.1. ARCH and GARCH and their variations 66
5.2. Multivariate GARCH 70
5.3. Stochastic volatility 74
5.4. Examples and cases 75
5.5. Empirical literature 82

6 Shock persistence and impulse response analysis **89**
6.1. Univariate persistence measures 90
6.2. Multivariate persistence measures 92
6.3. Impulse response analysis and variance decomposition 95
6.4. Non-orthogonal cross-effect impulse response analysis 98
6.5. Examples and cases 99
6.6. Empirical literature 108

7 Modelling regime shifts: Markov switching models **113**
7.1. Markov chains 113
7.2. Estimation 114
7.3. Smoothing 117
7.4. Time-varying transition probabilities 119
7.5. Examples and cases 120
7.6. Empirical literature 126

8 Present value models and tests for rationality and market efficiency **131**
8.1. The basic present value model and its time series characteristics 131
8.2. The VAR representation 133
8.3. The present value model in logarithms with time-varying discount rates 136
8.4. The VAR representation for the present value model in the log-linear form 138
8.5. Variance decomposition 139
8.6. Examples and cases 140
8.7. Empirical literature 147

9 State space models and the Kalman filter **151**
9.1. State space expression 151
9.2. Kalman filter algorithms 152
9.3. Time-varying coefficient models 153
9.4. State space models of commonly used time series processes 154

9.5. Examples and cases 158
9.6. Empirical literature 164

10 Frequency domain analysis of time series **168**
10.1. The Fourier transform and spectra 168
10.2. Multivariate spectra, phases and coherence 172
10.3. Frequency domain representations of commonly used time series processes 173
10.4. Frequency domain analysis of the patterns of violation of white noise conditions 175
10.5. Examples and cases 182
10.6. Empirical literature 194

11 Limited dependent variables and discrete choice models **198**
11.1. Probit and logit formulations 199
11.2. Multinomial logit models and multinomial logistic regression 202
11.3. Ordered probit and logit 205
11.4. Marginal effects 207
11.5. Examples and cases 210
11.6. Empirical literature 220

12 Limited dependent variables and truncated and censored samples **226**
12.1. Truncated and censored data analysis 226
12.2. The Tobit model 230
12.3. Generalisation of the Tobit model: Heckman and Cragg 233
12.4. Examples and cases 234
12.5. Empirical literature 242

13 Panel data analysis **249**
13.1. Structure and organisation of panel data sets 250
13.2. Fixed effects vs. random effects models 252
13.3. Random parameter models 260
13.4. Dynamic panel data analysis 264
13.5. Examples and cases 269
13.6. Empirical literature 278

14 Research tools and sources of information **289**
14.1. Financial economics and econometrics literature on the Internet 289

14.2. Econometric software packages for financial and economic data analysis 291
14.3. Learned societies and professional associations 294
14.4. Organisations and institutions 299
