

# Contents in brief

<i>Full contents</i>	vi
<i>Preface</i>	x
Introduction	1
1 The science of climate change	3
2 Emissions scenarios and options for emission reduction	16
3 Abatement costs	30
4 Policy instruments for emission reduction	44
5 Impacts and valuation	73
6 Impacts of climate change	85
7 Climate and development	101
8 Optimal climate policy	108
9 Discounting, equity, uncertainty	123
10 Irreversibility and learning	144
11 International environmental agreements	152
12 Adaptation policy	163
13 Building an integrated assessment model	170
14 How to solve the climate problem?	190
<i>Index</i>	197

# Full contents

<i>Preface</i>	x
Introduction	1
<b>1 The science of climate change</b>	3
Tweet book	3
1.1 Processes**	3
1.2 Projections**	11
Further reading	14
<b>2 Emissions scenarios and options for emission reduction</b>	16
Tweet book	16
2.1 Sources of greenhouse gas emissions**	17
2.2 Trends in carbon dioxide emissions**	19
2.3 Scenarios of future emissions**	20
2.4 Options for emission reduction**	25
Further reading	27
Exercises	27
<b>3 Abatement costs</b>	30
Tweet book	30
3.1 The costs of emission reduction**	31
3.2 Negative abatement costs**	37
Further reading	42
Exercises	43
<b>4 Policy instruments for emission reduction</b>	44
Tweet book	44
4.1 The justification of public policy*	45
4.2 Direct regulation*	46
4.3 Market-based instruments*	47
4.4 Cost-effectiveness*	48
4.5 Dynamic efficiency****	50
4.6 Environmental effectiveness*	53
4.7 Taxes versus tradable permits under uncertainty**	54

4.8	Initial allocation of permits**	57
4.9	Initial and final allocation of permits*	59
4.10	International trade in emission permits***	60
4.11	Technological change**	63
4.12	Emissions trade in practice: The EU Emissions Trading System**	66
4.13	Emissions trade in practice: The Clean Development Mechanism**	70
	Further reading	71
	Exercises	71
<b>5</b>	<b>Impacts and valuation</b>	73
	Tweet book	73
5.1	Impacts of climate change**	74
5.2	Purpose of valuation*	76
5.3	Valuation methods: Revealed preferences*	77
5.4	Valuation methods: Stated preferences*	79
5.5	Issues for climate change: Benefit transfer**	80
5.6	Issues for climate change: WTP versus WTAC**	81
	Further reading	83
	Exercises	84
<b>6</b>	<b>Impacts of climate change</b>	85
	Tweet book	85
6.1	Reasons for concern**	85
6.2	Total economic impacts**	87
6.3	Impacts and development**	91
6.4	Marginal economic impacts**	95
6.5	The growth rate of the marginal impact***	98
	Further reading	99
	Exercises	99
<b>7</b>	<b>Climate and development</b>	101
	Tweet book	101
7.1	Growth models**	101
7.2	Natural disasters***	103
7.3	Poverty traps**	104
	Further reading	106
	Exercises	106
<b>8</b>	<b>Optimal climate policy</b>	108
	Tweet book	108

<b>12</b>	<b>Adaptation policy</b>	163
	Tweet book	163
12.1	Adaptation versus mitigation**	163
12.2	The government's role in adaptation**	164
12.3	Adaptation and development**	166
12.4	How to adapt**	167
	Further reading	168
	Exercises	168
<b>13</b>	<b>Building an integrated assessment model</b>	170
13.1	Introduction	170
13.2	Carbon cycle and climate	170
13.3	Scenarios	173
13.4	Abatement	176
13.5	Tradable permits	177
13.6	Impacts of climate change	178
13.7	Social cost of carbon	180
13.8	Development	182
13.9	Optimal climate policy	183
13.10	Discounting and equity	185
13.11	Uncertainty	186
13.12	Non-cooperative climate policy	187
13.13	Adaptation policy	188
<b>14</b>	<b>How to solve the climate problem?</b>	190
	Tweet book	190
14.1	The problem	191
14.2	Costs and benefits of climate policy	192
14.3	Complications	193
14.4	The solution	194
	Further reading	195
	<i>Index</i>	197
