# Contents

<b>1</b>	<b>Numerical series</b>	1
1.1	Round-up on sequences	1
1.2	Numerical series	4
1.3	Series with positive terms	9
1.4	Alternating series	16
1.5	The algebra of series	19
1.6	Exercises	21
1.6.1	Solutions	24
<b>2</b>	<b>Series of functions and power series</b>	33
2.1	Sequences of functions	34
2.2	Properties of uniformly convergent sequences	37
2.2.1	Interchanging limits and integrals	37
2.2.2	Interchanging limits and derivatives	38
2.3	Series of functions	39
2.4	Power series	43
2.4.1	Algebraic operations	50
2.4.2	Differentiation and integration	52
2.5	Analytic functions	54
2.6	Power series in $\mathbb{C}$	58
2.7	Exercises	59
2.7.1	Solutions	63
<b>3</b>	<b>Fourier series</b>	75
3.1	Trigonometric polynomials	76
3.2	Fourier Coefficients and Fourier series	79
3.3	Exponential form	88
3.4	Differentiation	89
3.5	Convergence of Fourier series	90
3.5.1	Quadratic convergence	90

## VIII Contents

3.5.2	Pointwise convergence . . . . .	93
3.5.3	Uniform convergence . . . . .	95
3.5.4	Decay of Fourier coefficients . . . . .	96
3.6	Periodic functions with period $T > 0$ . . . . .	96
3.7	Exercises . . . . .	98
3.7.1	Solutions . . . . .	100
<b>4</b>	<b>Functions between Euclidean spaces . . . . .</b>	<b>111</b>
4.1	Vectors in $\mathbb{R}^n$ . . . . .	111
4.2	Matrices . . . . .	114
4.3	Sets in $\mathbb{R}^n$ and their properties . . . . .	120
4.4	Functions: definitions and first examples . . . . .	126
4.5	Continuity and limits . . . . .	130
4.5.1	Properties of limits and continuity . . . . .	137
4.6	Curves in $\mathbb{R}^m$ . . . . .	138
4.7	Surfaces in $\mathbb{R}^3$ . . . . .	142
4.8	Exercises . . . . .	145
4.8.1	Solutions . . . . .	147
<b>5</b>	<b>Differential calculus for scalar functions . . . . .</b>	<b>155</b>
5.1	First partial derivatives and gradient . . . . .	155
5.2	Differentiability and differentials . . . . .	160
5.2.1	Mean Value Theorem and Lipschitz functions . . . . .	165
5.3	Second partial derivatives and Hessian matrix . . . . .	168
5.4	Higher-order partial derivatives . . . . .	170
5.5	Taylor expansions; convexity . . . . .	171
5.5.1	Convexity . . . . .	173
5.6	Extremal points of a function; stationary points . . . . .	174
5.6.1	Saddle points . . . . .	179
5.7	Exercises . . . . .	183
5.7.1	Solutions . . . . .	187
<b>6</b>	<b>Differential calculus for vector-valued functions . . . . .</b>	<b>201</b>
6.1	Partial derivatives and Jacobian matrix . . . . .	201
6.2	Differentiability and Lipschitz functions . . . . .	202
6.3	Basic differential operators . . . . .	204
6.3.1	First-order operators . . . . .	204
6.3.2	Second-order operators . . . . .	211
6.4	Differentiating composite functions . . . . .	212
6.4.1	Functions defined by integrals . . . . .	214
6.5	Regular curves . . . . .	217
6.5.1	Congruence of curves; orientation . . . . .	220
6.5.2	Length and arc length . . . . .	222
6.5.3	Elements of differential geometry for curves . . . . .	225
6.6	Variable changes . . . . .	227

6.6.1	Special frame systems . . . . .	230
6.7	Regular surfaces . . . . .	236
6.7.1	Changing parametrisation . . . . .	240
6.7.2	Orientable surfaces . . . . .	241
6.7.3	Boundary of a surface; closed surfaces . . . . .	243
6.7.4	Piecewise-regular surfaces . . . . .	247
6.8	Exercises . . . . .	248
6.8.1	Solutions . . . . .	251
<b>7</b>	<b>Applying differential calculus . . . . .</b>	<b>261</b>
7.1	Implicit Function Theorem . . . . .	261
7.1.1	Local invertibility of a function . . . . .	267
7.2	Level curves and level surfaces . . . . .	268
7.2.1	Level curves . . . . .	269
7.2.2	Level surfaces . . . . .	273
7.3	Constrained extrema . . . . .	274
7.3.1	The method of parameters . . . . .	277
7.3.2	Lagrange multipliers . . . . .	278
7.4	Exercises . . . . .	285
7.4.1	Solutions . . . . .	288
<b>8</b>	<b>Integral calculus in several variables . . . . .</b>	<b>297</b>
8.1	Double integral over rectangles . . . . .	298
8.2	Double integrals over measurable sets . . . . .	304
8.2.1	Properties of double integrals . . . . .	313
8.3	Changing variables in double integrals . . . . .	316
8.4	Multiple integrals . . . . .	321
8.4.1	Changing variables in triple integrals . . . . .	327
8.5	Applications and generalisations . . . . .	329
8.5.1	Mass, centre of mass and moments of a solid body . . . . .	329
8.5.2	Volume of solids of revolution . . . . .	331
8.5.3	Integrals of vector-valued functions . . . . .	334
8.5.4	Improper multiple integrals . . . . .	334
8.6	Exercises . . . . .	336
8.6.1	Solutions . . . . .	342
<b>9</b>	<b>Integral calculus on curves and surfaces . . . . .</b>	<b>365</b>
9.1	Integrating along curves . . . . .	366
9.1.1	Centre of mass and moments of a curve . . . . .	372
9.2	Path integrals . . . . .	373
9.3	Integrals over surfaces . . . . .	375
9.3.1	Area of a surface . . . . .	379
9.3.2	Centre of mass and moments of a surface . . . . .	381
9.4	Flux integrals . . . . .	381
9.5	The Theorems of Gauss, Green and Stokes . . . . .	383

9.5.1	Open sets, admissible surfaces and boundaries . . . . .	383
9.5.2	Divergence Theorem . . . . .	389
9.5.3	Green's Theorem . . . . .	391
9.5.4	Stokes' Theorem . . . . .	393
9.6	Conservative fields and potentials . . . . .	395
9.6.1	Computing potentials explicitly . . . . .	402
9.7	Exercises . . . . .	404
9.7.1	Solutions . . . . .	408
<b>10</b>	<b>Ordinary differential equations . . . . .</b>	<b>419</b>
10.1	Introductory examples . . . . .	419
10.2	General definitions . . . . .	422
10.3	Equations of first order . . . . .	428
10.3.1	Equations with separable variables . . . . .	428
10.3.2	Homogeneous equations . . . . .	430
10.3.3	Linear equations . . . . .	431
10.3.4	Bernoulli equations . . . . .	435
10.3.5	Riccati equations . . . . .	435
10.3.6	Second-order equations reducible to first order . . . . .	436
10.4	The Cauchy problem . . . . .	438
10.4.1	Local existence and uniqueness . . . . .	438
10.4.2	Maximal solutions . . . . .	442
10.4.3	Global existence . . . . .	444
10.4.4	Global existence in the future . . . . .	446
10.4.5	First integrals . . . . .	449
10.5	Linear systems of first order . . . . .	452
10.5.1	Homogeneous systems . . . . .	454
10.5.2	Non-homogeneous systems . . . . .	457
10.6	Linear systems with constant matrix $\mathbf{A}$ . . . . .	459
10.6.1	Homogeneous systems with diagonalisable $\mathbf{A}$ . . . . .	460
10.6.2	Homogeneous systems with non-diagonalisable $\mathbf{A}$ . . . . .	464
10.6.3	Non-homogeneous systems . . . . .	468
10.7	Linear scalar equations of order $n$ . . . . .	471
10.8	Stability . . . . .	476
10.8.1	Autonomous linear systems . . . . .	478
10.8.2	Two-dimensional systems . . . . .	479
10.8.3	Non-linear stability: an overview . . . . .	485
10.9	Exercises . . . . .	487
10.9.1	Solutions . . . . .	492
<b>Basic definitions and formulas</b>	<b>507</b>
