

Contents

<i>Preface</i>	vii
<i>To the Instructor</i>	xvii
<i>To the Student</i>	xxiii

Chapter 1

Vectors 1

1.0	Introduction: The Racetrack Game	1
1.1	The Geometry and Algebra of Vectors	3
1.2	Length and Angle: The Dot Product	18
	<i>Exploration: Vectors and Geometry</i>	32
1.3	Lines and Planes	34
	<i>Exploration: The Cross Product</i>	48
	<i>Writing Project: The Origins of the Dot Product and Cross Product</i>	49
1.4	Applications	50
	Force Vectors	50
	Chapter Review	55

Chapter 2

Systems of Linear Equations 57

2.0	Introduction: Triviality	57
2.1	Introduction to Systems of Linear Equations	58
2.2	Direct Methods for Solving Linear Systems	64
	<i>Writing Project: A History of Gaussian Elimination</i>	82
	<i>Explorations: Lies My Computer Told Me</i>	83
	Partial Pivoting	84
	<i>Counting Operations: An Introduction to the Analysis of Algorithms</i>	85
2.3	Spanning Sets and Linear Independence	88
2.4	Applications	99
	Allocation of Resources	99
	Balancing Chemical Equations	101
	Network Analysis	102
	Electrical Networks	104
	Linear Economic Models	107
	Finite Linear Games	109
	<i>Vignette: The Global Positioning System</i>	121
2.5	Iterative Methods for Solving Linear Systems	124
	Chapter Review	134

Chapter 3

Matrices 136

3.0	Introduction: Matrices in Action	136
3.1	Matrix Operations	138
3.2	Matrix Algebra	154
3.3	The Inverse of a Matrix	163
3.4	The <i>LU</i> Factorization	180
3.5	Subspaces, Basis, Dimension, and Rank	191
3.6	Introduction to Linear Transformations	211
	<i>Vignette: Robotics</i>	226
3.7	Applications	230
	Markov Chains	230
	Linear Economic Models	235
	Population Growth	239
	Graphs and Digraphs	241
	Chapter Review	251

Chapter 4

Eigenvalues and Eigenvectors 253

4.0	Introduction: A Dynamical System on Graphs	253
4.1	Introduction to Eigenvalues and Eigenvectors	254
4.2	Determinants	263
	<i>Writing Project: Which Came First: The Matrix or the Determinant?</i>	283
	<i>Vignette: Lewis Carroll's Condensation Method</i>	284
	<i>Exploration: Geometric Applications of Determinants</i>	286
4.3	Eigenvalues and Eigenvectors of $n \times n$ Matrices	292
	<i>Writing Project: The History of Eigenvalues</i>	301
4.4	Similarity and Diagonalization	301
4.5	Iterative Methods for Computing Eigenvalues	311
4.6	Applications and the Perron-Frobenius Theorem	325
	Markov Chains	325
	Population Growth	330
	The Perron-Frobenius Theorem	332
	Linear Recurrence Relations	335
	Systems of Linear Differential Equations	340
	Discrete Linear Dynamical Systems	348
	<i>Vignette: Ranking Sports Teams and Searching the Internet</i>	356
	Chapter Review	364

Chapter 5

Orthogonality 366

5.0	Introduction: Shadows on a Wall	366
5.1	Orthogonality in \mathbb{R}^n	368
5.2	Orthogonal Complements and Orthogonal Projections	378
5.3	The Gram-Schmidt Process and the QR Factorization	388
	<i>Explorations: The Modified QR Factorization</i>	396
	<i>Approximating Eigenvalues with the QR Algorithm</i>	398
5.4	Orthogonal Diagonalization of Symmetric Matrices	400
5.5	Applications	408
	Quadratic Forms	408
	Graphing Quadratic Equations	415
	Chapter Review	425

Chapter 6

Vector Spaces 427

6.0	Introduction: Fibonacci in (Vector) Space	427
6.1	Vector Spaces and Subspaces	429
	<i>Writing Project: The Rise of Vector Spaces</i>	443
6.2	Linear Independence, Basis, and Dimension	443
	<i>Exploration: Magic Squares</i>	460
6.3	Change of Basis	463
6.4	Linear Transformations	472
6.5	The Kernel and Range of a Linear Transformation	481
6.6	The Matrix of a Linear Transformation	497
	<i>Exploration: Tilings, Lattices, and the Crystallographic Restriction</i>	515
6.7	Applications	518
	Homogeneous Linear Differential Equations	518
	Chapter Review	527

Chapter 7

Distance and Approximation 529

7.0	Introduction: Taxicab Geometry	529
7.1	Inner Product Spaces	531
	<i>Explorations: Vectors and Matrices with Complex Entries</i>	543
	<i>Geometric Inequalities and Optimization Problems</i>	547
7.2	Norms and Distance Functions	552
7.3	Least Squares Approximation	568
7.4	The Singular Value Decomposition	590
	<i>Vignette: Digital Image Compression</i>	607
7.5	Applications	610
	Approximation of Functions	610
	Chapter Review	618

Chapter 8

Codes *Online only* 620

8.1	Code Vectors	620
	<i>Vignette: The Codabar System</i>	626
8.2	Error-Correcting Codes	627
8.3	Dual Codes	632
8.4	Linear Codes	639
8.5	The Minimum Distance of a Code	644

APPENDIX A	Mathematical Notation and Methods of Proof	A1
APPENDIX B	Mathematical Induction	B1
APPENDIX C	Complex Numbers	C1
APPENDIX D	Polynomials	D1
APPENDIX E	Technology Bytes	<i>Online only</i>

Answers to Selected Odd-Numbered Exercises	ANS1
Index	I1
